

HOW TO USE

WEBUFFET

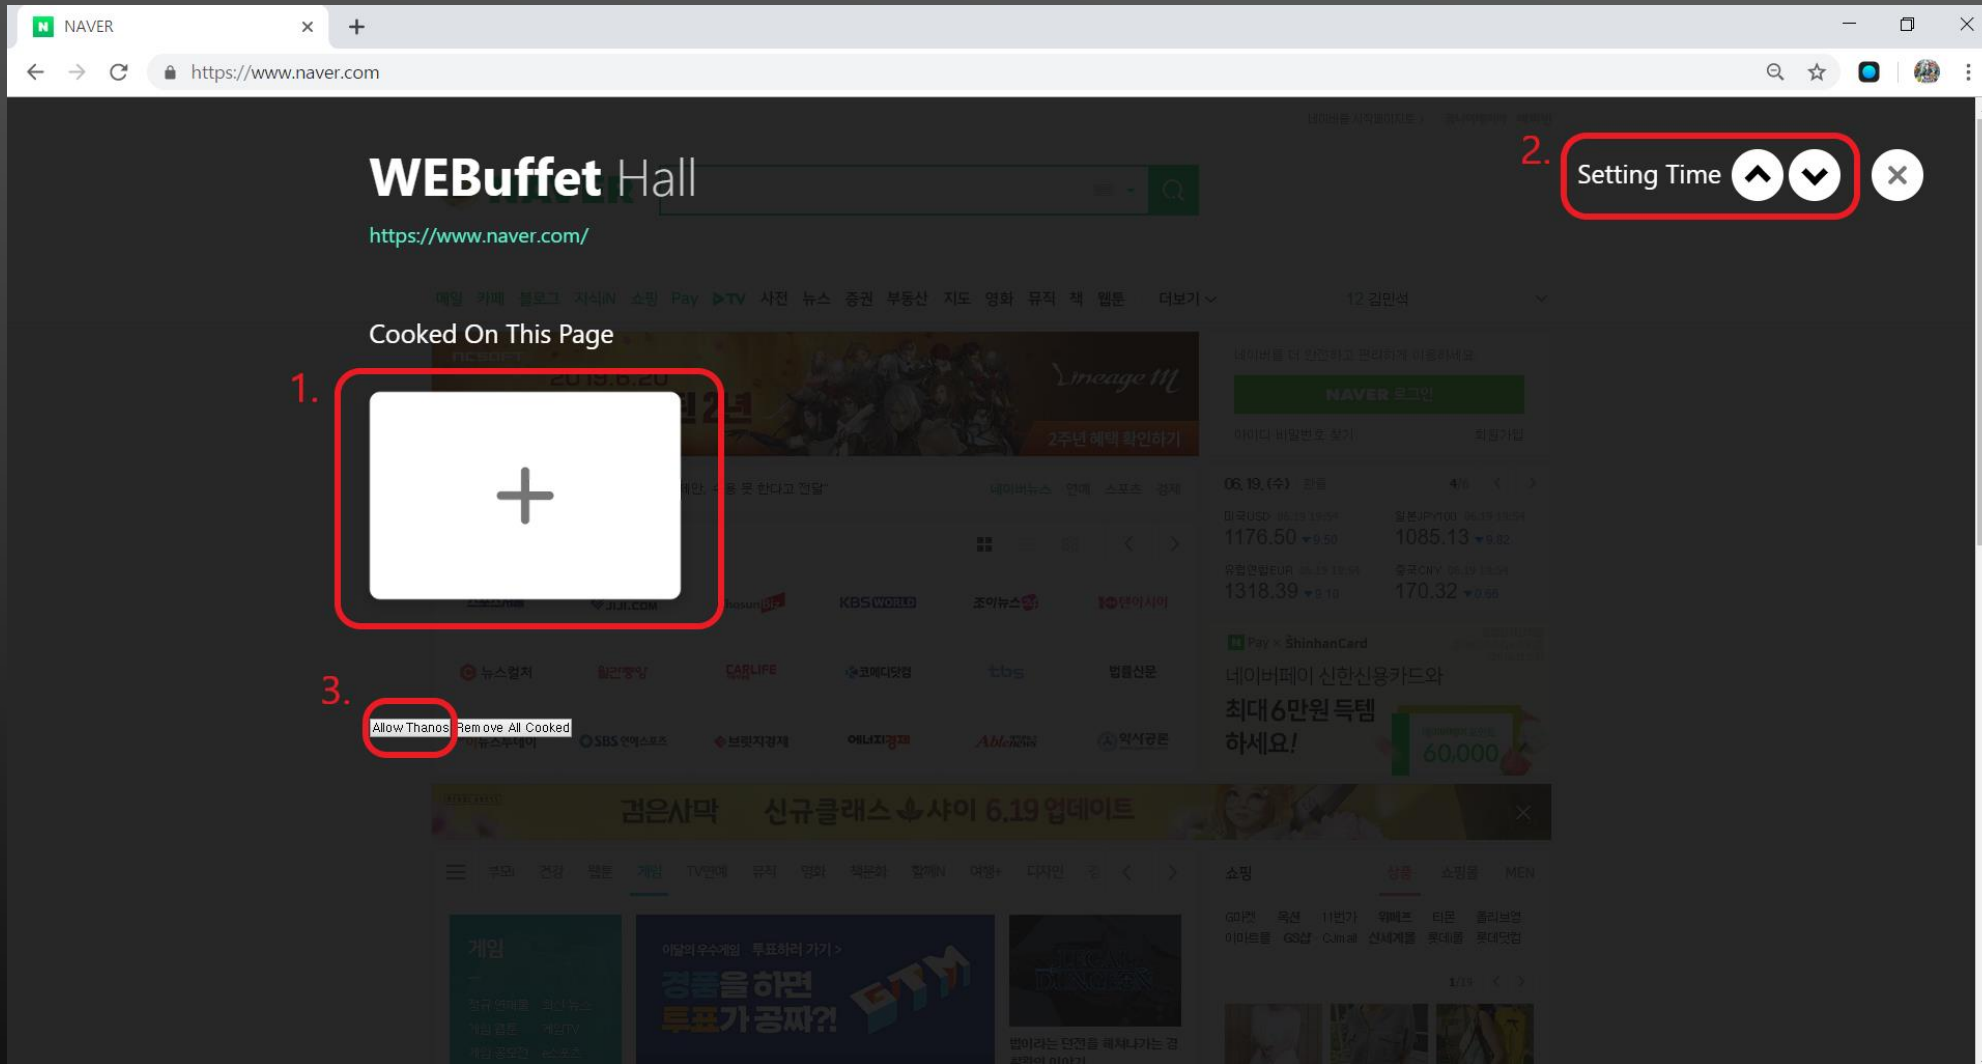

1. After setting **WEBuffet**, go to any site you want to change
(If it's working, the WEBuffet icon will appear)

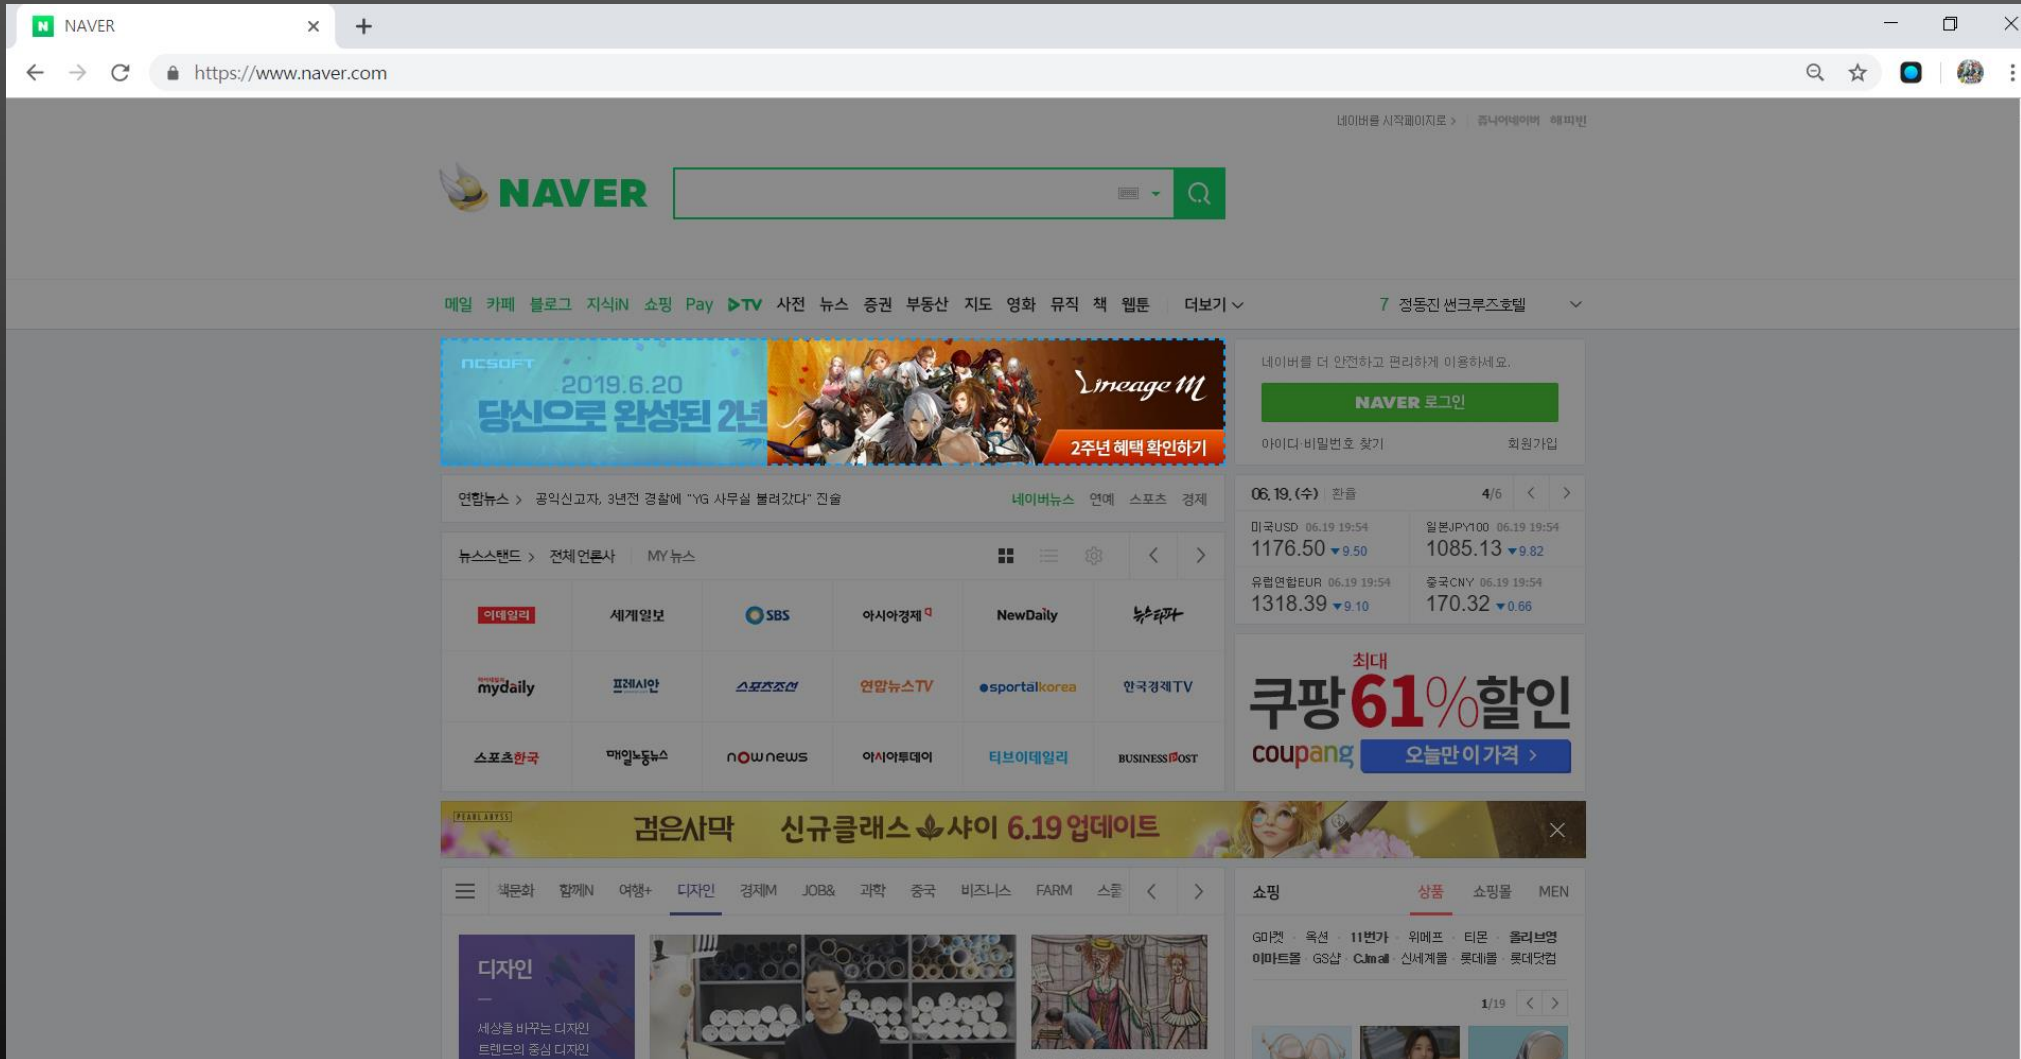

2. Click **right mouse**, then you can see **Active Webuffet**

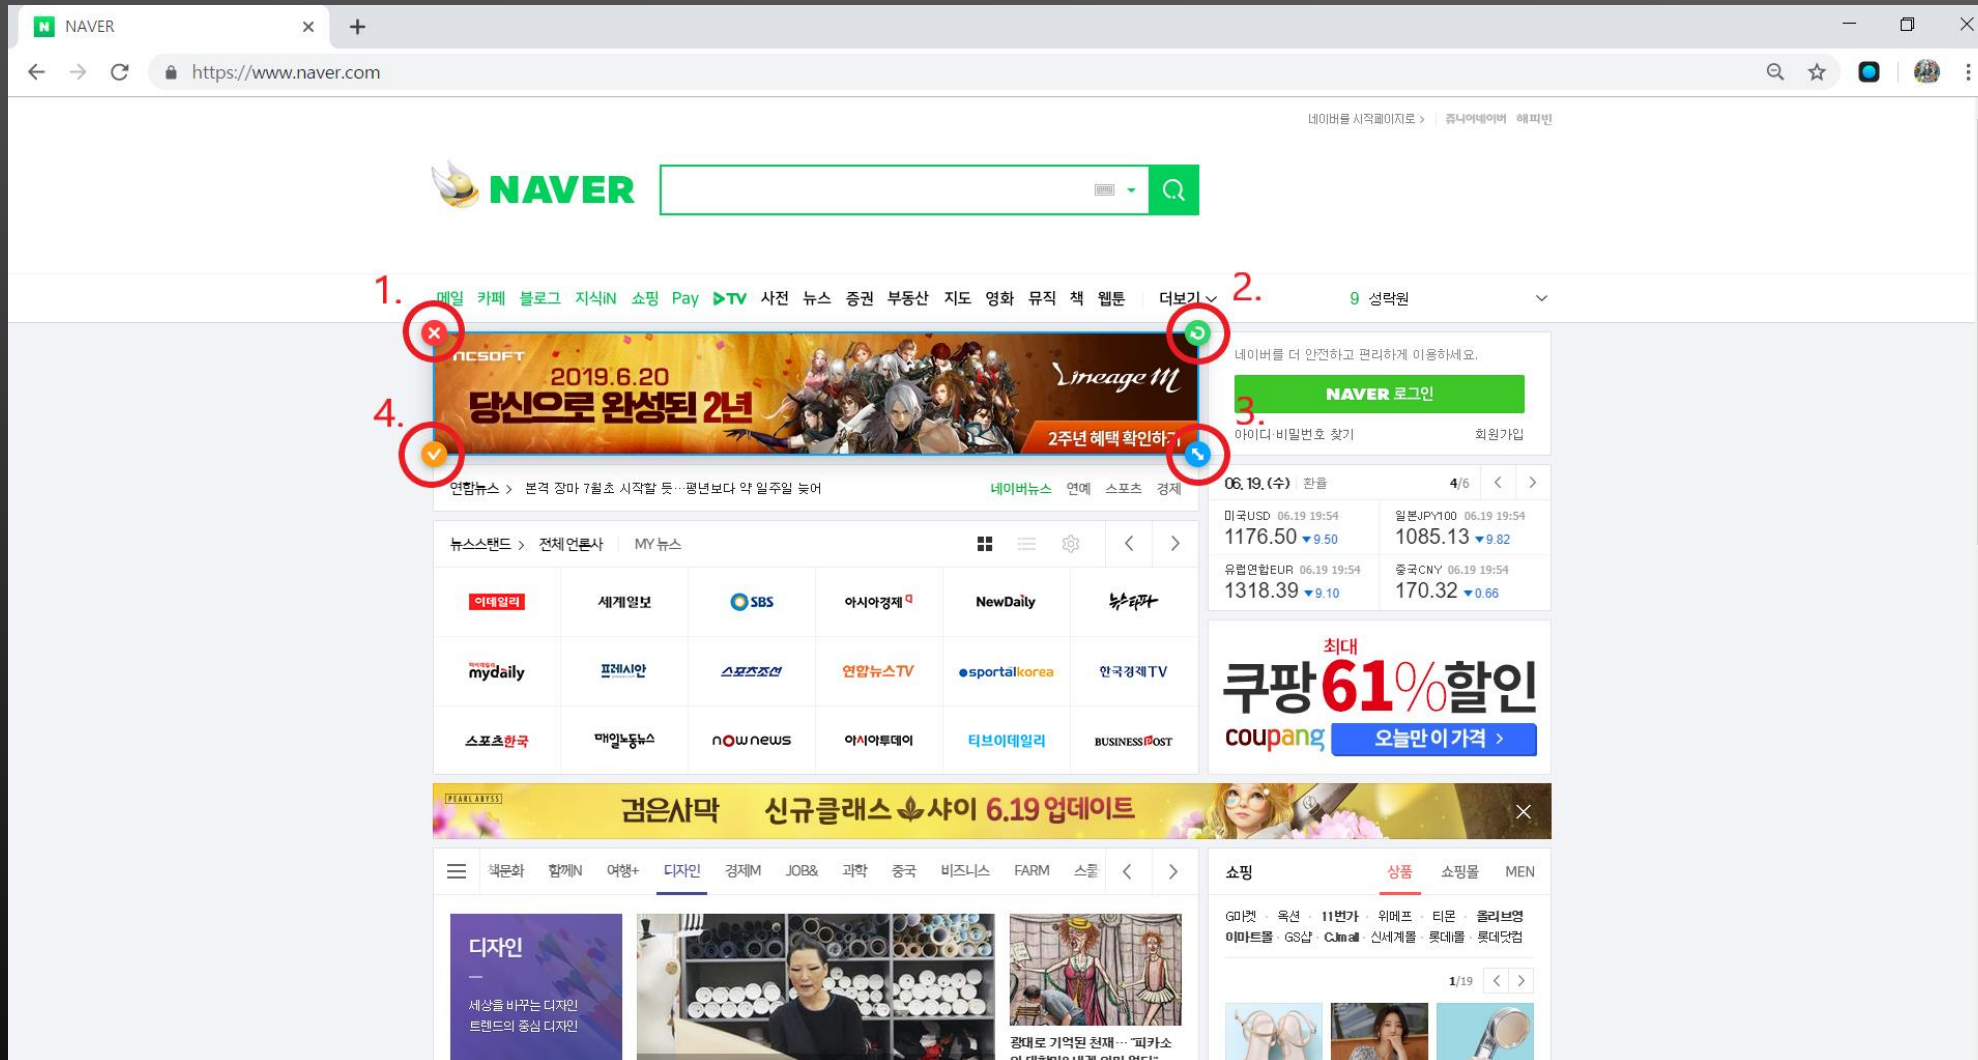

3. Click anywhere on website and click

(1) **+** button is begin editing (2) **Arrow** button to change time

(3) **Allow Thanos** changes deletion motion (explain **Remove All Cooked** later)

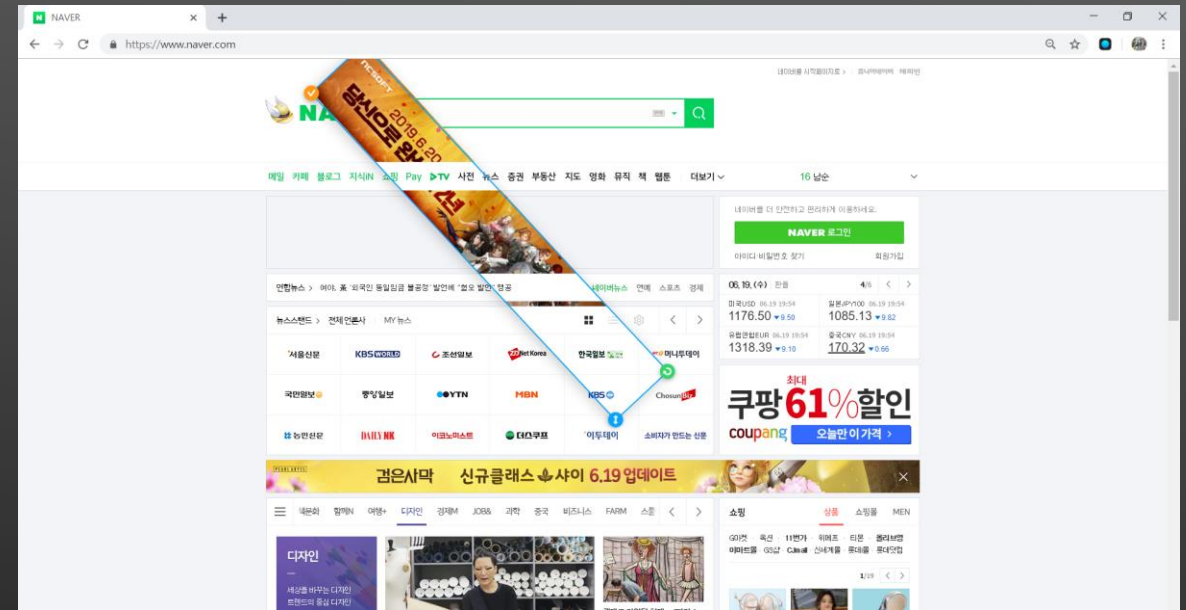

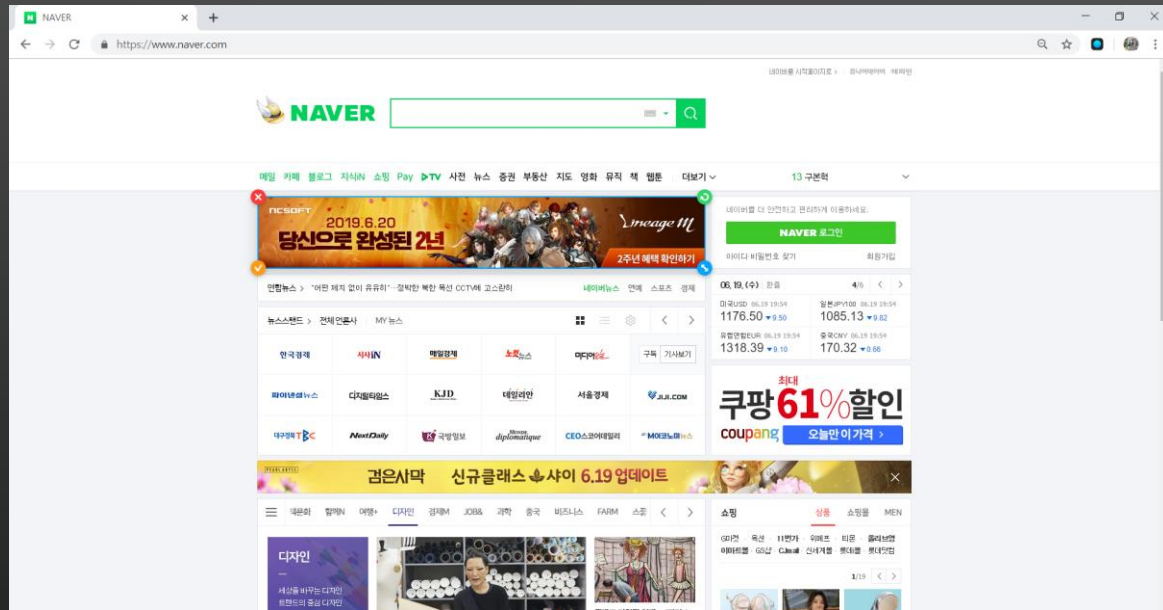

4. **Stay** your mouse pointer **1 second(or customed time)** to select element what you want to change
(If you go out of the border before being selected, it will be cancelled.)

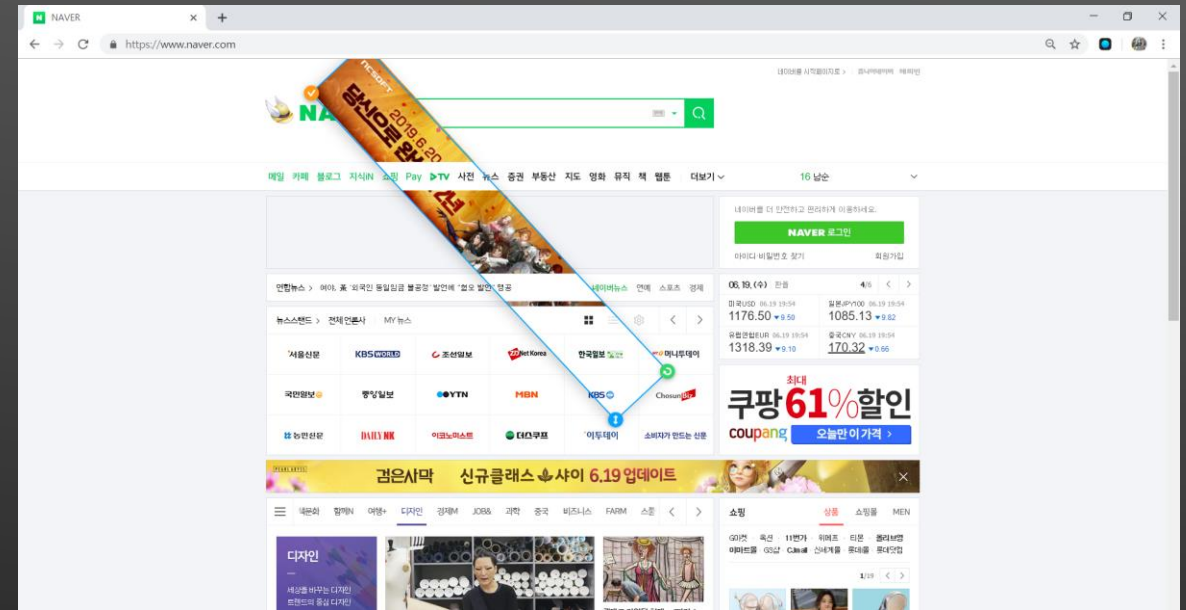

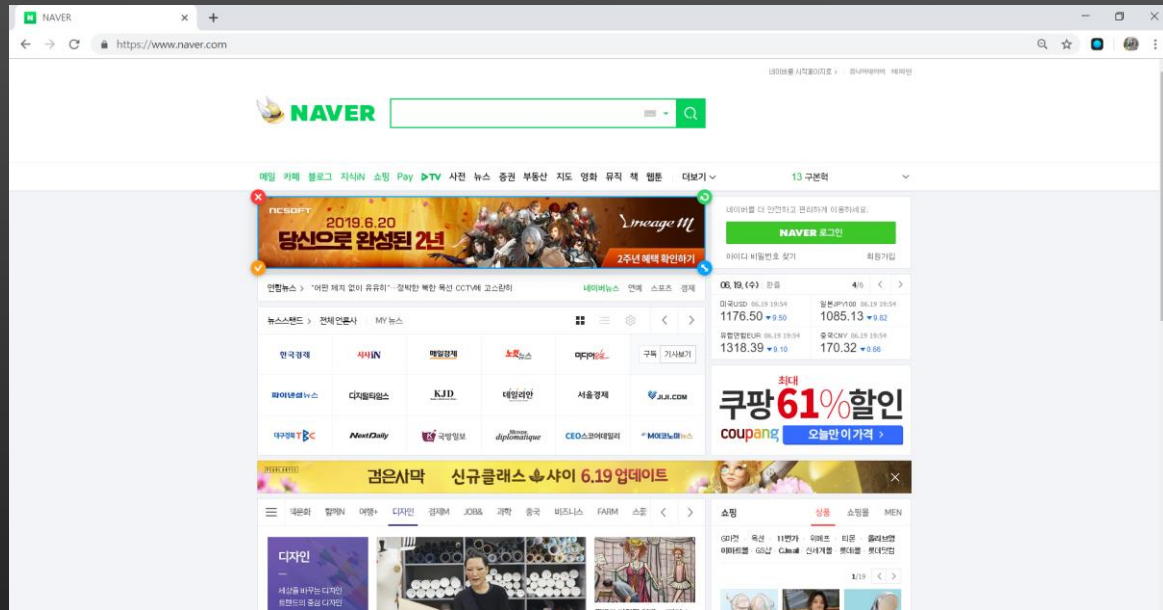

5. **Choose** what you want to do

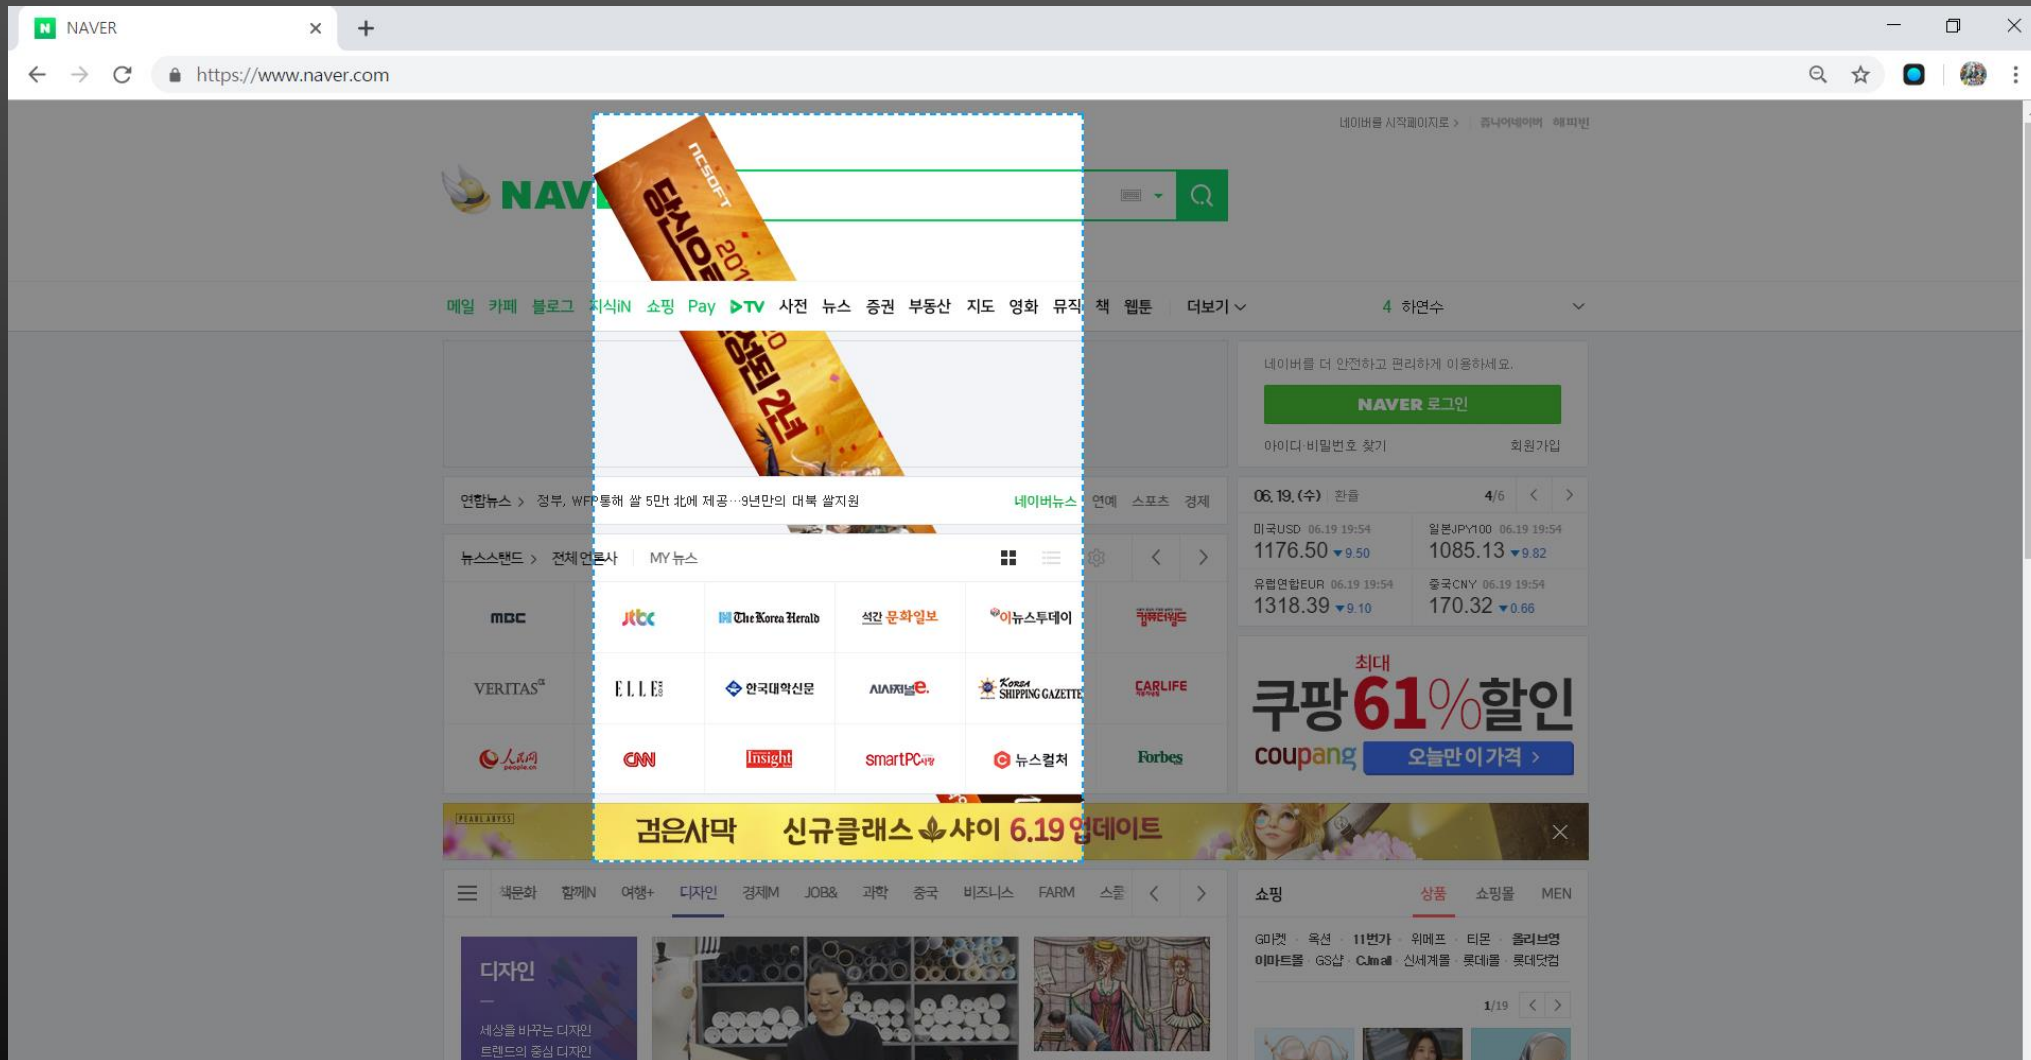

(1) is delete (2) is rotate (3) is size (4) is saving changes and returning to choice (drag) is move

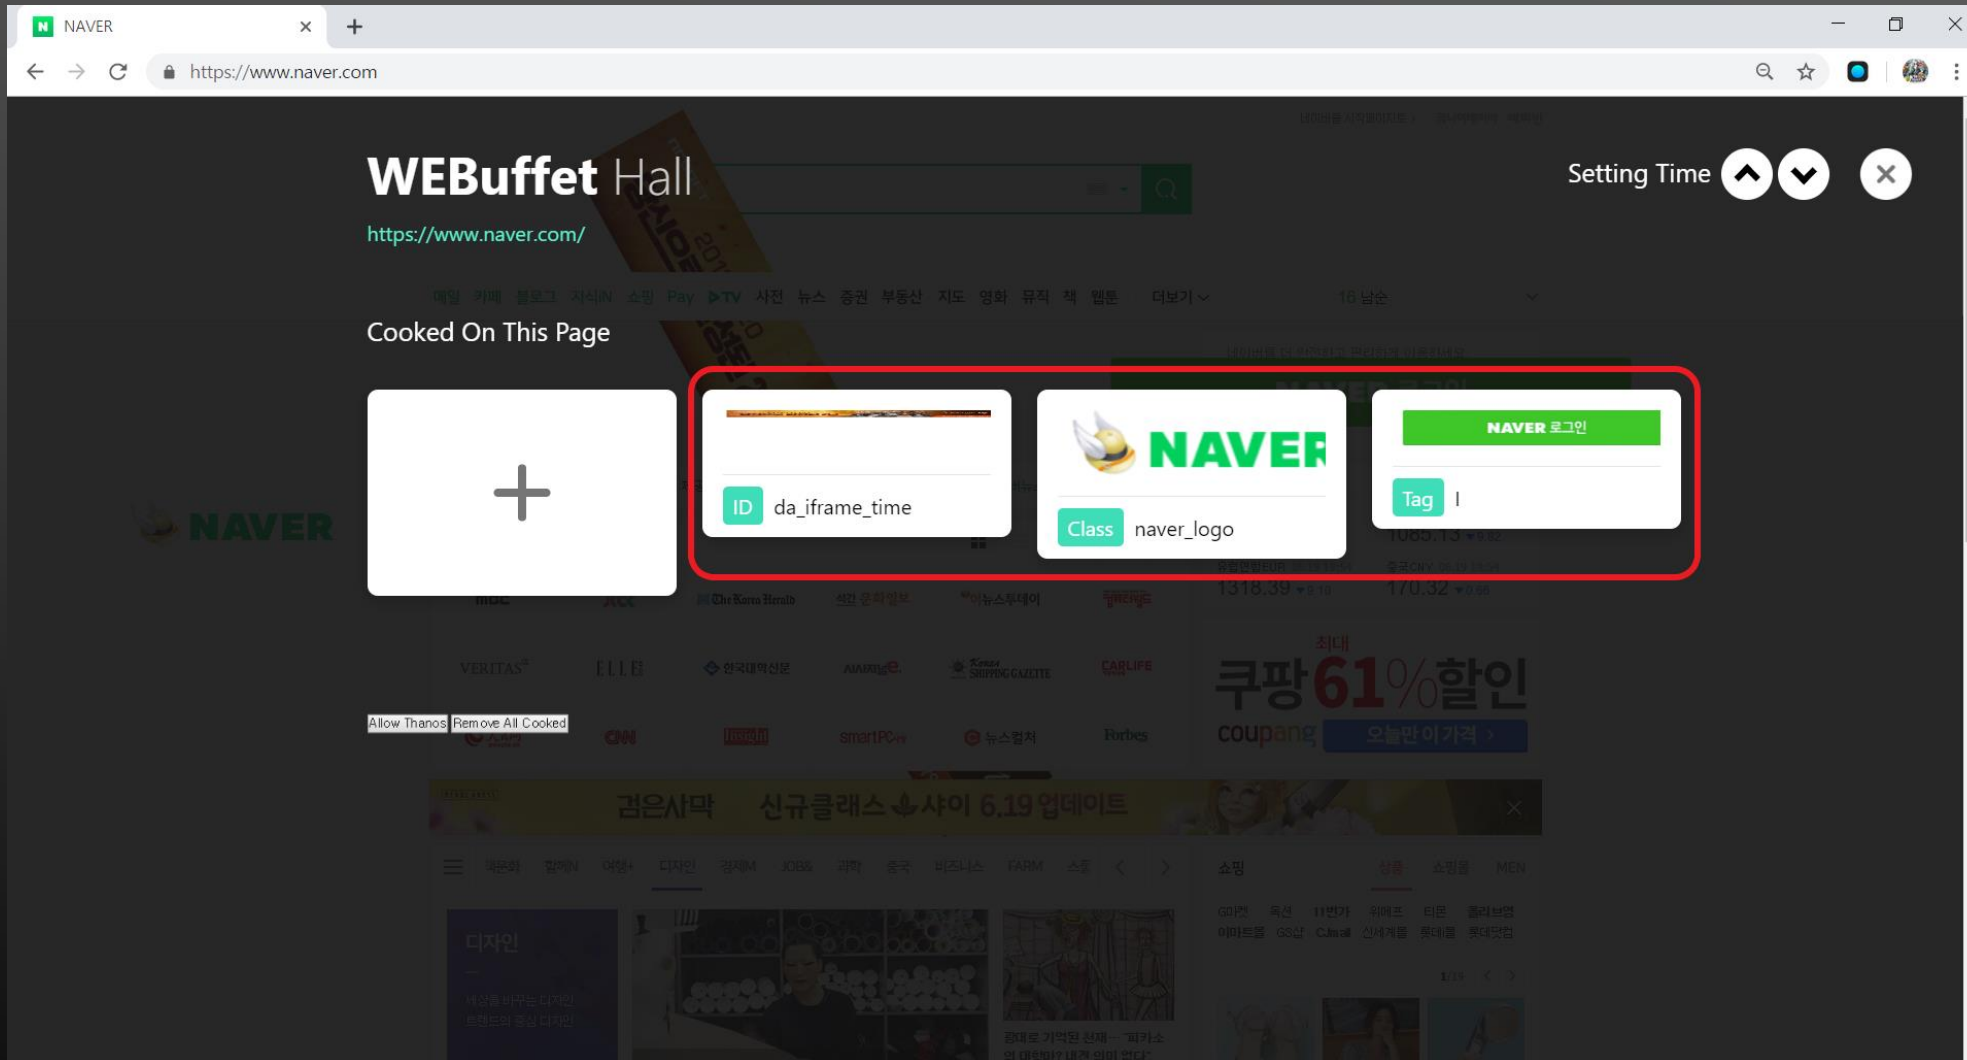

6. If you want to '**undo**' your choice, just press '**ctrl + z**'

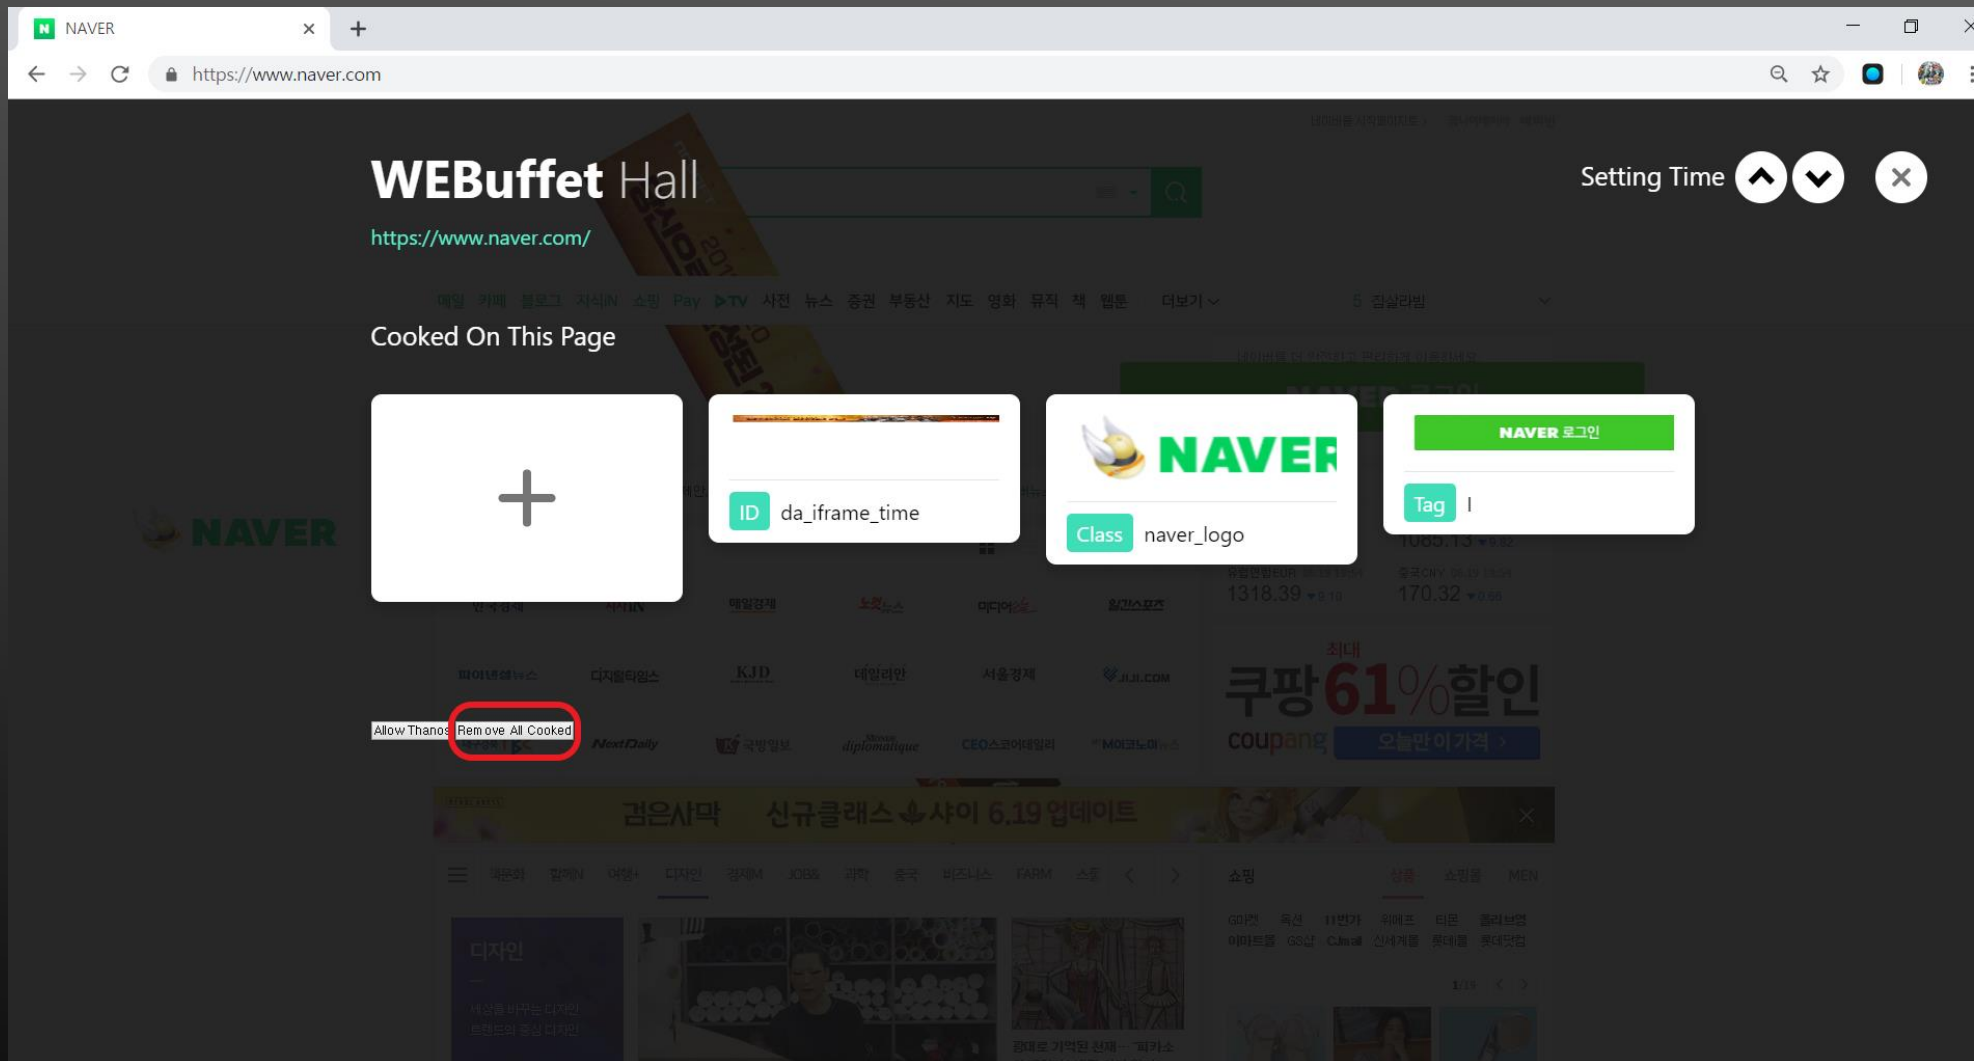

7. If you want to 'redo' your choice, just press 'ctrl + shift + z'

8. If you want to **quit** change selected one, just press '**esc**' button or click **check** button on apex

9. If you press 'esc' button again, you will return to **WEBuffet Hall** and you can see what you change

10. If you click **Remove All cooked** button, everything you've changed is going back to their original state.
